

## Edge Clips & Dividers

The PABS 239 can be used to easily handle lane dividers and other precast concrete elements.

- The closing kinematics of the claws on the load is controlled automatically by the traction of the load. When the load is placed on the ground and the traction is released, the clamp is released.
- The load holding jaws are made of diamond hard metal.
- The range of apertures allows a wide variety of items to be taken.
